module

Bring responsiveness and certainty to your facility's outages

PRISM sees exactly how your systems are interconnected. It understands when and why they need to be functional, and the challenges to getting the right equipment and supplies in place. Its unique perspective of availability brings sharp foresight to your schedule.

Now you can approach your outages with complete confidence.

Capitalize on PRISM's power

View a schedule's impact on all availability needs

Advanced suggestions for streamlining outages

React to changes with real-time solutions

Preempt material & inventory supply issues

Levelize specialized resources

Risk reduction at your command

Fully customizable rulesets for instant evaluation against schedules

Data integration with your planning software

Lock-out / tag-out sequence testing to optimize, eliminating errors

Real-time computation enables rapid what-if analysis

PRISM identifies a deviation from requirements

Choose your direction

An outage is a complex journey from one plant state to another. Any journey can be navigated by unfolding a map, trying to estimate the challenges along each potential route, then setting off with the hope of avoiding trouble.

But instead, why not open an app that can see accurately how challenges will affect your journey, provide options, and instantly respond to changes?

How would you prefer your facility to get from A to B?

Optimized and predictable outages

An end to configuration surprises

Streamlined planning and review

Less downtime
